Office Action Summary

Art Unit: 1761

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 3, 4, 6 and 7 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Reiner et al (cols. 2-6).

Reiner et al discloses a compressed pharmaceutical chewing gum tablet composed of gum base particles including a sweetener ~~gum~~ and an anti-caking agent i.e., magnesium stearate, the particles ^{being} ~~being~~ coated with a coating agent and the tablet further including a pharmaceutically active ingredient effective toward an individual's gastrointestinal (GI) tract, e.g., an anti-inflammatory medicament or cimetidine. The tablet in Reiner et al ^{is} ~~is~~ free of a grinding ^{a-d} ~~agent~~ since ⁿ ~~one~~ is disclosed as being present therein.

4. Claims 2 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Reiner et al.

Finding the optimum particle size in the compressed gum tablet would require nothing more than routine experimentation by one reasonably skilled in this art.

Art Unit: 1761

Further, it would have been obvious to select precipitated silicon dioxide as the anti-caking agent in Reiner et al's tablet, which includes said active agent effective toward the GI tract, since precipitated silica is used as an anti-caking agent in a chewing gum tablet which includes a pharmaceutical active agent, as evidenced by Reiner et al (col. 6, line 25).
